Far Hills Sinkhole Recap

“The sewer pipe under the parking lot has been repaired. Here are the pics from the project. The pipe shifted almost 24 inches below the rest of the pipe and was raised by chain and backfilled underneath with concrete and gravel to prevent this from happening again. Also, when digging they found a man hole access two feet below grade. It was raised up so it can now be accessed from the area. It appears that no trees had to be removed during the project.
Big thank you to the City of Centerville!!!”

-Bob Hess, Facilities Manager
