Wash Hands to Stop the Spread of Germs

December 1-7 is Handwashing Awareness Week. Handwashing is one of the best ways to stop the spread of germs that cause illness. Make sure to wash your hands thoroughly by following these steps:

- **Wet** your hands with clean, running water. Add soap.
- **Lather** your hands with soap. Wash all surfaces on hands. Wash carefully between your fingers, around the tops and palms, over wrists, and under fingernails.
- **Scrub** your hands for at least 20 seconds.
- **Rinse** your hands well under clean, running water.
- **Dry** your hands with a clean, disposable paper towel.
- Turn off the faucet using the disposable paper towel instead of your clean, bare hands.

When should you wash your hands?

- Before, during and after you prepare a meal or before eating
- After handling raw meat, poultry, seafood, eggs or flour
- After blowing your nose, coughing or sneezing
- After using the bathroom
- Before and after caring for someone at home who is sick with vomiting or diarrhea
- Before and after treating a cut or wound
- After changing diapers or cleaning up someone who has used the bathroom
- After touching an animal, animal feed, or animal waste
- After handling pet food or pet treats
- After touching garbage
