

Bloodborne Pathogen Training and Universal Precautions

Handling of Blood and Vomit

The handling and disposal of bodily fluids policies and procedures will be provided to the parents of all children at the time of enrollment in the childcare program and is available upon request.

Definition: Pathogenic microorganisms that are present in human blood and can cause disease in humans. These pathogens include, but are not limited to, hepatitis B virus (HBV), hepatitis C virus (HCV) and human immunodeficiency virus (HIV).

Contaminated: the presence or the reasonably anticipated presence of blood or vomit or other potentially infectious materials on an item or surface.

Exposure Incident: A specific eye, mouth, other mucous membrane, non-intact skin or parenteral contact with blood or vomit or other potentially infectious materials that result from the performance of an employee's duties.

What's an Exposure?

- Blood contact with mucous membranes
 - Eyes
 - Nose
 - Mouth
- Blood contact with Broken Skin
- Piercing Mucous Membranes or the skin barrier through such events as:
 - Needlesticks
 - Bites
 - Cuts
 - Abrasions

Exposure Control Plan

Universal precautions will be observed at this facility in order to prevent contact with blood or other potentially infectious materials.

Employees are expected to:

- Wear single use, disposable gloves
- Wear eye protection – located in first aid box located in the office
- Wear them when:
 - There is contact with blood, open wounds, or sores
 - Administering first aid and when any form of body fluid might be involved
 - Applying/changing bandages
 - Handling items or surfaces with soiled blood

The Center will provide:

- Single use, disposable gloves in accessible areas
 - Changing tables
 - Emergency backpack
 - Staff will keep in pockets of vest.
- Single use resuscitation barrier equipment for CPR. Located in office in first aid kit
- Single use disposable bags with ties. Kept in changing tables
- Eye protection – kept in First Aid box located in the office

All blood-contaminated material must be disposed of in a plastic bag with a secure tie. Double knotting a bag is considered a secure tie. This plastic bag is disposed of in the janitor's closet rather than kept in the classroom wastebasket.

Any surfaces (tables, floors, toys) coming into contact with potentially infectious bodily fluids are cleaned and disinfected using Peroxide and Quat. Additionally, after cleaning and disinfecting toys may be put through the Automatic Sanitizer.

As part of this policy, a “sharps container” will be kept in the Front Office out of the reach of children. All sharps items used for a special care need must be disposed in this container.

All staff, including substitutes, will be trained on Calvary's Hourly Child Care handling and disposal of bodily fluids policy/procedures and universal precautions to reduce the risk of spreading infectious disease:

- At orientation
- At least once each calendar year

Orientation and ongoing training will be documented in Calvary Hourly Child Care staff files.

The handling and disposal of bodily fluids policies and procedures must be provided to the parents of all children at the time of enrollment and be made available upon request. This information can be found on Calvary Hourly Childcare website under policies.
